Dear Beets:

I was sorry to have missed you the other day when you stopped in during your vacation. Perhaps you will be stopping again on your way back?

Some time ago we received a letter from Giles requesting strains located on chromosome 5 which would be successful as markers in connection with his reversion studies. We have no definite information on anything close enough to inositoless to be of value and have written him accordingly. However, Laura has some preliminary evidence that C-86 which you sent us some time ago may be in this linkage group and might be of some use to him. The evidence is inconclusive and we were not planning on exploring this possibility further at this time. I thought, however, that you might be interested in these preliminary results and might consider letting Giles use this strain if your information supports it being in linkage group 5.

If our data would be of any use to you, we shall be glad to send it on. We shall, of course, be guided entirely by your wishes in regard to Giles's request.

With best regards,

Sincerely,

E. L. Tatum

ELT:m

Dear Ed

Many to sending Giles C86. We have no
dope on its linkage. Many says shid he glad to
see the data but doesn't really have a need for
it now.

Sorry I missed you.

Regards to all
Beets
